Our contribution to achieve CO₂ neutrality.

Our mission is to give you modern fireplaces that are safe, convenient and eco-friendly. Over the years we have developed the innovative BEV Technology® that allowed us to create an exceptionally clean and fully automated burning process of ethanol vapours. It produces lower carbon emissions and is safe for the environment. Discover ecological fireplaces of the future.

Ethanol is an organic distillate made from plants.
It is known to produce lower CO₂ emissions.

100% of the emissions are
compensated by plants
absorbing CO₂.

The netzero technology changes
liquid ethanol into gas. The flame
has full access to oxygen.

The clean burning of ethanol vapour emits
significantly less CO₂ than regular fireplaces.
No ash, soot or smoke are produced.
